

TNT CAPITAL

Homepage Story + Wireframe + Narrative Motion

Desktop-first interaction specification for the quiet Vietnam 2045 world.

01 / STORY MAP

One continuous journey, not eight separate sections

The user enters a version of Vietnam that already feels complete, then discovers the institution, the questions, the capital, and the builders behind that horizon.

The page should feel like one controlled cinematic editorial experience. The visual world is established once in the hero and then echoed rather than repeated. Each section changes the mode of attention: atmosphere → institution → inquiry → discipline → creation → invitation.

#	SECTION	MODE	STORY JOB
01	Hero — Vietnam 2045	HORIZON	Enter the achieved future. The world exists before the interface.
02	About	INSTITUTION	Meet the firm inside that horizon. Landscape becomes institutional structure.
03	Insights	INQUIRY	See one world become multiple questions through the research windows.
04	Investment Management	CAPITAL	Watch questions collapse into judgment, filtering and allocation.
05	Venture	BUILDERS	See the disciplined grid open back into builders, products and productive environments.
06	Closing Invite	INVITATION	Return to the horizon with a present-day invitation.
07	Footer	GROUNDING	Resolve into the institution.

01B / GLOBAL LAYOUT GRAMMAR

Desktop grid + spacing

LAYOUT	DIRECTION
Canvas	1440 px design target; full-bleed backgrounds when called for.
Content width	Approx. 1280–1320 px maximum content frame.
Grid	12 columns with generous gutters; use 4/8, 5/7 and 3/9 splits more often than equal halves.
Outer margin	Approx. 56–72 px on desktop.
Vertical rhythm	Large section padding. Avoid compressed landing-page stacking.
Rule	One dominant idea per viewport.

Global composition rules

- Avoid default 50/50 splits unless the content truly requires symmetry.
- Headlines should occupy fewer columns than the background or image field around them.
- Use section numbering, thin rules, and alignment as structure before adding containers.
- Allow at least one quiet transition zone between the major cinematic moments.
- Do not carry image-heavy composition through every section; contrast is part of the story.

Reading width

Keep body copy narrow even when the section is wide. The page can feel expansive without making paragraphs expansive. Large scale belongs to headlines, image fields, and whitespace.

02 / HERO

Arrival: Vietnam 2045 is already here

The first screen should not explain the future. It should place the visitor inside it.

LAYOUT	DIRECTION
Height	145–165 svh. A sticky 100 svh visual stage holds the landscape long enough for the horizon to become a narrative object.
Background	Full-bleed landscape photography or slow cinematic loop.
Image logic	Wide green terrain + one intentional human-built or productive element + distant horizon.
Header	Top overlay, transparent at load. Minimal navigation.
Content plate	Lower-left or left-center, roughly 5 columns wide. TNT Mist or lightly translucent Mist.
Hero text	Eyebrow → H1 → 2-line body → primary + secondary CTA.
Bottom navigation	A restrained horizontal index: About / Insights / Investment Management / Venture / Explore. It should not compete with the horizon or the first scroll transformation.
2045 cue	Present once in eyebrow or context label; do not turn the hero into a “2045 campaign.”
Narrative exit	The landscape compresses vertically until the distant horizon survives as a thin horizontal line. That same line becomes the editorial rule inside About.

Composition

Keep the object or path in the landscape away from the copy. The image needs one area of intentional calm where the content plate can sit without fighting the scene. The horizon should remain visible; it is the central metaphor.

Motion

- Extremely slow foreground/background separation or parallax.
- Natural movement only: mist, grass, water, light, shadow.
- Content plate enters with a soft fade and short upward ease.
- No animated numbers, futuristic data overlays, particles, or glowing linework.

The first impression should be: “I want to be in this future,” not “this website is showing me the future.”

03 / ABOUT

From atmosphere to institution

The hero earns attention emotionally. About must immediately convert that attention into institutional clarity.

LAYOUT	DIRECTION
Height	Approx. 90–105 svh so the transformed horizon-rule has time to settle before the statement appears.
Surface	White.
Top cue	Small label “ABOUT” aligned to the grid.
Primary statement	Large H2/H1-scale statement across 6–8 columns.
Body	Two short paragraphs, max 4–5 columns wide.
CTA	Read about the firm →
Imagery	None in v1. The transformed horizon line is the visual memory of the hero.
Narrative exit	The editorial rule continues across the grid and fractures into six narrow vertical cuts. Those cuts become the initial research windows in Insights.

Suggested placement

Place the label in columns 1–2. Let the statement begin around columns 3–4 and run toward column 10. Put the body and CTA lower-right beneath the statement. The section should feel spacious enough that the visitor notices the change from cinematic landscape to white institutional calm.

Transition from hero

Do not cut directly from image to white space. Let the hero compress until only the distant horizon remains; carry that exact horizontal position forward as the first editorial rule in About.

04 / INSIGHTS

Inquiry: prove the worldview is studied

Insights is the evidence layer. It turns the 2045 theme from belief into a research practice, presented as a horizontal gallery of tall editorial article covers rather than a conventional card grid.

LAYOUT	DIRECTION
Surface	TNT Mist or White. The rule arriving from About is still visible at the top of the sequence.
Intro row	Eyebrow “03 / INSIGHTS” + title on left; deck + “Explore all insights →” on right. Keep this readable before the rail begins moving.
Article gallery	6 portrait-oriented article cards in one pinned horizontal editorial rail. The sequence begins as six narrow vertical windows, then opens into the full tall-card composition.
Card proportions	Inactive windows/cards: roughly 160–190 px wide. Active card: roughly 280–340 px wide. Keep the portrait silhouette; the expansion must feel architectural, not like a hover zoom.
Card image	Portrait photography fills each vertical window. No landscape thumbnails, rounded SaaS cards, or 3 × 2 grid.
Text hierarchy	Inactive: image-first, almost no copy. Active: category → article/date metadata → title → optional short deck in a light content plate near the lower portion of the image.
Interaction	Vertical page scroll drives horizontal rail movement. The card nearest the reading position becomes active, expands, and reveals its information; neighboring cards physically make room. Cursor adds only an observation layer inside images.
Section height	Approx. 190–230 svh desktop. Pin the rail for the core sequence so vertical scrolling becomes horizontal editorial movement, then release naturally into Investment Management.

How 2045 appears here

Not as background art. It appears through subject selection: businesses, capital markets, technology, industrial capability, urban transformation, global positioning, and other forces that make the long horizon concrete.

05 / INVESTMENT MANAGEMENT

Discipline: understanding becomes allocation

This is the most controlled section of the homepage. The grid should tighten and imagery should recede.

LAYOUT	DIRECTION
Height	Approx. 175–210 svh. Begin with the six article-window rules collapsing into a stricter investment grid; then hold a sticky 5/7 split through the filtering sequence.
Surface	Soft Gray or TNT Mist.
Layout	5/7 split.
Left	Eyebrow, title, short deck, CTAs. Left column may remain sticky for part of the scroll.
Right	Three principles stacked vertically with 01 / 02 / 03 labels and thin dividers.
Imagery	None. Use rules, spacing and typography as the visual metaphor for judgment becoming clearer.
Motion	Questions arrive as multiple faint lines/fragments. Through principles 01 → 03, visual noise is progressively removed until only the strongest structure remains.
CTA	Explore Investment Management → / Talk to us →
Narrative exit	One surviving vertical rule from the investment grid widens into an aperture. Photography appears behind it; the aperture becomes the first Venture image window.

Why the visual language changes

The homepage has moved from a national horizon to investment judgment. The section should feel like a reduction of noise: fewer images, stronger alignment, more rules, more accountability. This contrast gives the later Venture section room to become visually alive again.

06 / VENTURE

Builders: open the page back up

Venture is where the abstract horizon becomes human and productive. It should feel more alive than Investment Management without becoming startup theater.

LAYOUT	DIRECTION
Height	Approx. 150–185 svh. Begin inside the aperture created by Investment Management, then let image windows recompose over the scroll.
Surface	Dark Green.
Text	White headings, TNT Mist body.
Layout	Start with one narrow opening, then move through large rectangular image fields with changing proportions. Keep only 1–2 image subjects in the sequence.
Imagery	Real builders, productive environments, systems, products or infrastructure. The world feels capable and calm, never “startup hustle.”
Image treatment	Large rectangular crops and masks. No floating-card collage. Keep only 1–2 image subjects in the sequence.
Motion	Image windows change width and position as the visitor scrolls. One window may dominate while another becomes a narrow slice, then the hierarchy reverses.
CTA	Our venture approach → / Talk to us →
Narrative exit	The image windows progressively narrow and disappear. Dark Green remains. A low-contrast horizon returns, reconnecting builders to the long-term world from the hero.

The image brief

- Show people building, operating, designing, testing, producing, or maintaining.
- Prefer real environments over staged portraits.
- Keep the scene calm and capable — no “hustle” visual language.
- If technology appears, it should be a tool inside the environment, not the visual identity of the future.

Narrative role

Public markets show TNT allocating into existing capability. Venture shows TNT participating earlier in capability still being formed. That contrast should be understood even if the visitor reads only the headlines.

07 / CLOSING + FOOTER

Return to the horizon, then resolve

The ending should echo the emotional stillness of the hero without simply repeating the opening image.

LAYOUT	DIRECTION
Closing height	Approx. 100–115 svh. Give the page enough time to decelerate after the Venture recomposition.
Surface	Dark Green continuing from Venture, or Dark Green transitioning into a very low-contrast landscape.
Headline	Large, two-line statement: “Our horizon is long. The conversation can start today.”
Body	One short paragraph.
CTA	Start a conversation →
Visual cue	The returning horizon is the primary visual cue. It should feel familiar without simply replaying the hero image.
Footer	White or TNT Mist; 4-column information structure; no dramatic animation.
Motion	Venture windows close → dark field → horizon returns → headline settles. Motion visibly slows until only the CTA remains interactive.

Closing behavior

The hero starts with a long-range idea. The closing converts it into a present action. This gives the page a complete loop: the visitor enters 2045, understands TNT’s role, and returns to today with a reason to engage.

Footer hierarchy

- TNT Capital identity + one-line descriptor.
- Research: Insights / Vietnam 2045 / Weekend TNT.
- Firm: About / Investment Management / Venture / Contact.
- Newsletter: short blurb + email capture.
- Legal: Privacy / Terms / LinkedIn / copyright.

08 / SCROLL CHOREOGRAPHY

The transitions are the story

TRANSITION	VISUAL SHIFT	STORY MEANING
Hero → About	Landscape compresses; horizon survives as a horizontal rule.	The achieved world becomes institutional structure.
About → Insights	One rule fractures into six narrow vertical research windows.	Institution becomes inquiry; one worldview becomes multiple questions.
Insights → Investment Management	Six image windows lose photography and collapse into rules that realign as the investment grid.	Questions become judgment and allocation.
Investment Management → Venture	One surviving grid rule widens into an aperture; photography appears behind it.	Capital opens into builders and creation.
Venture → Closing	Image windows narrow away; Dark Green holds; the horizon returns.	Creation reconnects to the long horizon.
Closing → Footer	Horizon and motion resolve into a static utility field.	The worldview resolves into the institution.

Overall pace

The page should breathe, but the major chapters must physically hand visual material to the next chapter. The visitor should feel one continuous transformation rather than a stack of sections. Use longer pinned sequences only where the narrative requires them: Hero, Insights, Investment Management and Venture.

Atmosphere at the edges. Clarity in the middle. That is the rhythm of the homepage.

09 / BLUEPRINT SUMMARY

Homepage at a glance

SECTION	SPACE / SURFACE	FEELING
HEADER	Overlay / transparent	Quiet authority
HERO	145–165 svh / sticky full-bleed landscape → horizon line	The achieved horizon
ABOUT	90–105 svh / White / horizon-rule carried through	The institution
INSIGHTS	190–230 svh / pinned portrait research rail	The questions
INVESTMENT MANAGEMENT	175–210 svh / structured filtering field	The discipline
VENTURE	150–185 svh / Dark Green / recomposing image windows	The builders
CLOSING	100–115 svh / Dark Green + returned horizon	The invitation
FOOTER	Content-driven / White or Mist	The grounding

Final screen test

If the page is shown without its copy, the sequence should still communicate: achieved horizon → horizon becomes rule → rule becomes research windows → windows become investment grid → grid opens into builders → builders dissolve back into horizon.

Next production step

Prototype the complete transformation chain first: Hero horizon → About rule → Insights windows → Investment grid → Venture aperture → Closing horizon. Individual hover effects are secondary until this chain works as one story.

The homepage moves as one continuous argument

2045 is already here. The motion explains how TNT exists inside that world.

The homepage should not read as a series of animated components. A visual element from one chapter must survive, transform, or open into the next. The motion therefore has a chain of custody: horizon → rule → research windows → investment grid → Venture aperture → horizon.

CHAPTER	VISUAL OBJECT	TRANSFORMATION	MEANING
Hero	Distant horizon	Compresses into a rule	The world becomes structure.
About	Editorial rule	Fractures into six vertical cuts	Structure becomes questions.
Insights	Portrait research windows	Lose imagery and realign as rules	Questions become judgment.
Investment Management	Disciplined grid	One rule widens into an aperture	Judgment becomes participation.
Venture	Image windows	Narrow and disappear	Builders return to the long horizon.
Closing	Returned horizon	Settles into stillness	The future becomes a present invitation.

Motion hierarchy

- Primary motion = section-to-section transformation. This carries the story and gets the most attention.
- Secondary motion = pinned composition, image-window resizing, filtering and controlled horizontal travel.
- Tertiary motion = hover, cursor response, underline travel and micro-transitions.
- If a tertiary effect competes with the transformation chain, remove it.

Small circle, analytical behavior

The cursor remains a small circular system, but its job is no longer “make the website feel interactive.” It should reinforce the act of observing, examining and selecting. It stays quiet over typography and becomes slightly more perceptive inside imagery.

STATE	NARRATIVE MOTION
default	10–12 px circular cursor. Dark Green on light surfaces; TNT Mist on Dark Green or photograph. Immediate tracking with minimal lag.
navigation	Expand only slightly, plus 3–5 px magnetic pull on the text target. Keep the effect exact rather than playful.
horizontal scroll	Drives the confirmed shallow depth response: foreground 4–8 px, middle ground 2–4 px, horizon 1–3 px. Do not disturb the horizon-to-rule transformation.
search image	Cursor becomes a slightly larger ring. Inside the card image, it can reveal marginally sharper focus or an alternate crop layer while the surrounding image stays unchanged. Keep the effect subtle enough to read as examination, not a magnifying glass.
investment	Return to the basic small circle. The cursor should feel almost inactive while judgment/filtering takes over the story.
texture image	Slight expansion + 3–6 px crop response inside the active image window. No labels, no 3D tilt, no floating physics.
ending	Return to the basic state. The interaction system intentionally calms down.

The achieved world becomes institutional structure

STATE	NARRATIVE MOTION
entrance	The visitor lands inside the full landscape. Header is transparent; content plate arrives after the world is already visible.
defined stage	Hold the landscape for roughly one viewport. Natural atmospheric movement and shallow curvature depth are allowed, but the distant horizon must remain visually legible.
transformation	As the visitor scrolls past the reading point, the landscape compresses vertically from the top and bottom. Photography retreats while the distant horizon stays locked in place.
handoff	When the image is almost gone, the surviving horizon is no longer read as photography. It becomes a thin Dark Green/Military Green editorial rule on the incoming White About surface.
about reveal	The ABOUT label and institutional statement appear around the inherited rule. The large statement reveals through whitespace/masking, not through a generic fade.
exit	The inherited rule extends across more of the grid, preparing to fracture into the six research windows.

Story test

The visitor should feel that TNT did not leave the 2045 world to enter a corporate section. The world itself has been converted into the visual grammar of the institution.

One horizon becomes multiple questions

STATE	NARRATIVE MOTION
set-up	About is mostly still. The inherited rule is the only visual element that carries forward.
fracture	Near the end of the section, the horizontal rule divides into six anchor points. Those points pull downward into six narrow vertical cuts.
research windows	The six cuts widen just enough to reveal fragments of six different portrait images. At first they should read as windows, not complete cards.
intro copy	The Insights eyebrow/title/deck enters while the windows are still narrow. This establishes the idea that research is opening multiple views onto the same long-term world.
	Once the intro is readable, the rail pins and the windows become the active horizontal research sequence.

Vertical scroll becomes horizontal inquiry

This is the most editorially expressive sequence on the homepage. The six portrait article cards are not a carousel and not a hover gallery. They are a pinned research rail driven by normal vertical page scroll.

PHASE	COMPOSITION	MOTION
01 / Windows	Six narrow portrait slices across the page.	Fragments of imagery only; the user has not “opened” the research yet.
02 / Rail opens	Slices widen into full tall cards.	The rail establishes a horizontal track while the page remains vertically pinned.
03 / Reading position	One card reaches the primary reading zone.	That card expands from roughly 160–190 px to 280–340 px; neighbors shift aside.
04 / Article reveal	Active card exposes category, date, title and optional short deck.	Information plate reveals from the lower image area; cursor acts as an observation layer inside the image.
05 / Handoff	As the next card reaches the reading zone, the current card contracts and the next expands.	The sequence continues through all six without arrows or carousel controls.
06 / Resolve	Final active card completes, then all cards return toward narrow vertical structures.	Photography begins to fade so the windows can become pure rules for Investment Management.

Interaction rules

- Do not activate cards primarily through hover. Scroll position determines the editorial focus; hover/cursor only enriches the active image.
- The active card should expand materially, not 4–7%. The change in width is part of the reading choreography.
- Neighbor movement should feel like physical room being made for inquiry, not like cards bouncing away from the pointer.
- The rail must remain visually calm enough that a still screenshot still feels like TNT.

Questions become judgment

STATE	NARRATIVE MOTION
Resolved state	The six article cards have narrowed again. Their photographs and content plates begin losing opacity while their vertical edges remain.
Resolution collapse	The image surfaces disappear completely, leaving six vertical rules. No cards fly away and no new grid is introduced from nowhere.
Resolution alignment	Those six rules shift into the stricter 5/7 investment composition. Some merge, some disappear and three primary principle positions become visible.

Interface change	TNT CAPITAL / HOMEPAGE STORY + WIREFRAME + NARRATIVE MOTION / V3
Investment entrance	Mist/White resolves into Soft Gray or Mist with stronger structural contrast. The emotional temperature drops from inquiry to discipline. The title “Investing with discipline and perspective.” arrives only after the research windows have completed their transformation into the investment grid.

16 / INVESTMENT MANAGEMENT — FILTERING SEQUENCE

Capital is shown as reduction of noise

Investment Management should not become another reveal animation. The sequence should visually enact judgment: many possibilities enter, fewer survive, and the final structure becomes clearer.

SCROLL CHAPTER	VISUAL STATE	PRINCIPLE
Entrance	Multiple faint rules / fragments remain from the research rail. The grid feels information-rich but controlled.	Set-up
01	Relevant lines strengthen while peripheral fragments fade. The first principle is fully readable.	Understand before acting
02	More fragments disappear. Spacing opens. The second principle becomes dominant while 01 stays resolved and legible.	Think beyond the quarter
03	Only the strongest grid lines remain. The composition reaches its clearest, quietest state.	Let evidence change the view
Release	One surviving vertical line remains visually stronger than the others and begins to widen.	Transition to Venture

Cursor rule

Keep the cursor nearly neutral here. This section earns intensity through filtering and composition, not through pointer tricks.

17 / INVESTMENT MANAGEMENT → VENTURE

The grid opens into the real world

STATE	NARRATIVE MOTION
Set-up	At the end of principle 03, the investment composition is at maximum clarity. One vertical structural rule is still visually dominant.
Entrance	That rule widens slowly into a narrow vertical opening. Dark Green and photography become visible behind it.
Expansion	The opening grows until it becomes the first large Venture image window. The light investment surface is physically displaced rather than simply fading out.
Transitioning	The viewer experiences capital moving from judgment into participation: structure opens into builders, products and productive environments.

Creation returns movement and space to the page

Venture should feel more alive than Investment Management, but the energy comes from changing spatial hierarchy rather than startup-style animation.

PHASE	WINDOW COMPOSITION	STORY
01 / Opening	One dominant image window occupies most of the frame; a second may exist as a narrow slice.	The first builder/productive world is revealed.
02 / Recompose	Primary window narrows while the secondary window expands.	Attention shifts from one form of creation to another.
03 / Rebalance	Two fields may briefly share the frame before one becomes dominant again.	The page suggests multiple forms of capability without becoming a collage.
04 / Resolve	Both windows begin to narrow; image information reduces.	The builders are reconnecting to the larger national horizon.

Image motion

- Use large rectangular masks with changing width/position; avoid floating cards.
- Inside the active window, allow 2–5% counter-scroll crop drift and 3–6 px cursor crop response.
- Do not use perspective tilt, bounce, rotation, scattered tiles or kinetic startup language.

19 / VENTURE → CLOSING → FOOTER

The page returns to the horizon and becomes still

STATE	NARRATIVE MOTION
Venture exit	Image windows narrow until photography disappears. Dark Green remains uninterrupted.
Horizon return	A low-contrast horizon slowly appears at the same emotional register as the hero. It need not be the identical photograph; it must feel like the same world.
Closing headline	“Our horizon is long. The conversation can start today.” settles into place as motion decelerates.
Start A	Start a conversation → is the only element that keeps an obvious interaction response.
Footer	The horizon and dark field release into a White/Mist utility footer. No additional cinematic effect follows.

Narrative loop

The visitor starts inside 2045, travels through TNT’s way of observing, questioning, judging and backing builders, then returns to the same horizon understanding what TNT does inside that future.

Preserve the story even when the choreography simplifies

CONDITION	RULE
Pointer desktop	Full transformation chain, pinned Insights rail, filtering sequence, Venture apertures, custom cursor.
Tablet	Keep the horizon→rule and rule→windows ideas, but shorten pinning and remove custom cursor. Insights may become a snap rail rather than a long pinned horizontal track.
Mobile	No custom cursor or pointer parallax. Use horizontal swipe for portrait article cards. Preserve narrative through simplified masks: horizon→rule, cards→lines, line→image opening.
prefers-reduced-motion	No pinning, scrubbed transforms or parallax. Present the same visual sequence as static compositions with short opacity changes only.
Keyboard / focus	All links/cards retain visible focus states independent of the cursor and scroll choreography.
Performance fallback	If a transformation causes unstable scroll or text movement, simplify the animation but preserve the visual handoff object.

Prototype order

PRIORITY	PROTOTYPE	PASS CONDITION
01	Hero horizon → About rule	The same horizon is visibly perceived as becoming the institutional rule.
02	About rule → Insights windows → pinned rail	The research sequence feels like inquiry opening from the institutional structure, not a carousel.
03	Insights windows → Investment grid	The user can visually understand that research is becoming judgment.
04	Investment filtering → Venture aperture	The disciplined grid physically opens into builders without a hard section cut.
05	Venture recomposition → Closing horizon	The page loops back to the original emotional world and visibly decelerates.
06	Custom circular cursor	Only after the narrative transformations work; cursor must support observation without becoming the concept.

Success test: if every hover effect is removed, the homepage should still tell the complete story through scroll, transformation and composition.
